

Figure 1. ZF-CxxC proteins at CpG islands. (*A*) CFP1 (*top* panel, red) and KDM2A (*bottom* panel, blue) ChIP-seq analysis for an ~300 kb region of mouse chromosome 11 (data from Blackledge et al. 2010 and Thomson et al. 2010). Annotated genes and CGIs (green bars) are illustrated below the sequence traces. (*B*) CFP1 and KDM2A impose a specific chromatin environment at CGIs that is distinct from the rest of the genome.
